B.TECH. ARTIFICIAL INTELLIGENCE AND DATA SCIENCE Regulation-2023

CURRICULUM AND SYLLABI

5. NS/-

COLLEGE VISION AND MISSION

Vision

To be globally recognized for excellence in quality education, innovation and research for the transformation of lives to serve the society.

Mission

M1: Quality Education:

To provide comprehensive academic system that amalgamates the cutting-edge technologies with best practices.

M2: Research and Innovation:

To foster value- based research and innovation in collaboration with industries and institutions globally for creating intellectuals with new avenues.

M3: Employability and Entrepreneurship:

To inculcate the employability and entrepreneurial skills through value and skill-based training.

M4: Ethical Values:

To instill deep sense of human values by blending societal righteousness with academic professionalism for the growth of society.

DEPARTMENT VISION AND MISSION

Vision

Incorporating the Data Science skills and applying the acquired analytical knowledge in the heterogeneous domains through Artificial Intelligence

Mission

M1: Understand Data Science:

Amalgamation of Programming Knowledge, Mathematical Skill Set and Knowledge of Business Domains to face the challenges of the real-world requirement

M2: Applying the Acquired Knowledge:

Inculcating the spirit of applying the acquired knowledge, innovation and creativity among students to work in heterogeneous domains

M3: Capstone Project:

Providing forum to carry out a capstone project through collaborations with the industries

M4: Be socially beneficial and other moral concerns:

Inspiring the educational experience in the field of application development and ensure the design, principle and ethic to be followed in the society.

M5: Continuous Learning for keen Initiative:

Affording continuous learning in the field of current trends in Artificial Intelligence and Data Science for keen initiative and enterprise focused.

J. N.) (____

PROGRAMME OUTCOMES (POs)

PO1: Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis:

Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability:

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.

PO8: Ethics:

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning:

Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

2.18/-

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Acquiring the data:

To create an essential knowledge for extracting data from heterogeneous domains.

PEO2: Information Inferring and Knowledge representation:

To equip the student with knowledge, through different programming skills and creating a knowledge representation for the inferred data, so that it can be applied in the real time scenario.

PEO3: Design method:

To enable the student as a Data Analyst by designing a right Machine Learning algorithm and seamless programming skill to solve any sort of application.

PEO4: Systematic Enhancement:

To provide them with a keen knowledge on current trends and to enhance its impact periodically on the existing applications to meet the future scenario.

PROGRAM SPECIFIC OBJECTIVES (PSOs)

PSO 1: Mathematical Foundation and Data Procuring:

To utilize the knowledge of Mathematical concept in procured Data from various Data sources.

PSO 2: Intellect Applications and Research Technologies:

To utilize the technical concepts, ideas, methodologies and the new emerging technologies in Artificial Intelligence and use this knowledge in their analytic skill to solving the current and future Data Analytics real time applications.

PSO 3: Developments of Real Time Applications:

To utilize the knowledge acquired and create a forum to carry out a capstone project through collaborations with the industries

10	10 Mandatory Courses (MC*)		-	-	-	-	-	-	-	-
	Total	22	23	22	23	21	22	20	17	172

^{*} AEC and MC course Credits are not included for CGPA calculation

HONOURS DEGREE PROGRAMME:

The student is permitted to opt for earning an honours degree in the same discipline of engineering in addition to the degree in his/her own discipline. To earn an honours degree the student is required to earn an additional 18 - 20 credits (over and above the total 170 credits prescribed in the curriculum) starting from fourth semester onwards by completing 5 additional courses offered in respective semesters. A student is eligible to exercise this option if he/she has passed all the courses offered upto third semester in the first attempt itself and has earned a CGPA / GPA* (*for lateral entry) of not less than 8.0. The prescribed courses offered for Honours degree are given in **Annexure V**.

ANNEXURE - IV ABILITY ENHANCEMENT COURSES-(B) SKILL ENHANCEMENT COURSES

SI. No.	Course Code	Course Title
		SKILL ENHANCEMENT COURSE 1
4	U23ADS301	a) Clean code
1.		b) Exploring of GITHUB
		c) Aptitude - I
	U23ADS402	SKILL ENHANCEMENT COURSE 2
2.		a) API design - I
		b) Exploring of Research Tools
		c) Aptitude - II

UNIT-I Review of Number Systems Periods: 12

CO5

functions.

Review of Number systems – Conversion of Number systems – Binary addition and subtractions – Binary representation: Signed magnitude representation and Compliment representations – Binary codes – Boolean Algebra – Boolean functions – canonical forms.

Review the knowledge of Number systems and simplifications of Boolean

K3

K3

UNIT-II Boolean Function and Combinational Logic Design Periods: 12

Analyze and design the reconfiguration circuits.

Simplifications of Boolean function: Theorems and laws – K"Map and QuineMcCluskey method – Introduction to combinational circuits – Design procedures of Combinational circuits – Adders - Subtractors – Binary parallel Adder – Decoder – Encoder – Priority Encoder. Multiplexer – Demultiplexer.

UNIT-III Sequential Logic Design Periods: 12

Introduction to Sequential Circuits – Latches – Types of Latches: SR Latch and D Latch – Flip-Flop – Types of Flip-Flops: RS, JK, D, and T Flip-Flops – Excitation table of Flip-Flops. Counters: Asynchronous Counters – Synchronous counters – Mod counters. CO3 Shift registers – Types of Shift registers.

UNIT-IV Reconfiguration Digital Circuits Periods: 12

Introduction to Reconfiguration Digital Circuits – Memory – Hierarchy of Memory – RAM – Types of Ram – Memory Decoding of RAM – ROM. Programmable Logic Devices: Programmable Logic Array – Programmable Array Logic – Implementation of combinational circuits using RAM, ROM, PLA and PAL.

UNIT-V VHDL Periods: 12

Introduction to Hardware Description Language and VHDL – Design flow – Entity, architecture, process, configuration and package CO5 declarations – Signals and data types.

Lecture Periods: 45 Tutorial Periods: 15 Practical Periods: Total Periods: 60

Course Name	Progr	amming in C Laboratory	0	0	2	1	50	50	100	
		(Commo	(Common to All Branches)							
Prerequisite	NIL									
								apping st Level		
Course Outcomes	CO1	Implement logical formulations to applications.	Implement logical formulations to solve simple problems leading to specific applications.						∢ 3	
	CO2 Execute C programs for simple applications making use of basic constructs, arrays and strings.							∢ 3		
	CO3	CO3 Experiment C programs involving functions, recursion, pointers, and structures.							∢ 3	
	CO4	CO4 Demonstrate applications using sequential and random access file processing.								
	CO5	CO5 Build solutions for online coding challenges.								

List of Exercises

- 1. Write a C program to find the Area of the triangle.
- 2. Develop a C program to read a three digit number and produce output like

1 hundreds

7 tens

2 units

For an input of 172.

- 3. Write a C program to check whether a given character is vowel or not using Switch Case statement.
- 4. Write a C program to Print the numbers from 1 to 10 along with their squares.
- 5. Demonstrate do—While loop in C to find the sum of 'n' numbers.
- 6. Find the factorial of a given number using Functions in C.
- 7. Write a C program to check whether a given string is palindrome or not?
- 8. Write a C program to check whether a value is prime or not?
- 9. Develop a C program to swap two numbers using call by value and call by reference.
- 10. Construct a C program to find the smallest and largest element in an array.
- 11. Implement matrix multiplication using C program.
- 12. Write a C program to perform various string handling functions like strlen, strcpy, strcat, strcmp.
- 13. Develop a C program to remove all characters in a string except alphabets.
- 14. Write a C program to find the sum of an integer array using pointers.
- 15. Write a C program to find the Maximum element in an integer array using pointers.
- 16. Construct a C program to display Employee details using Structures
- 17. Write a C program to display the contents of a file on the monitor screen.
- 18. Write a File by getting the input from the keyboard and retrieve the contents of the file using file operation commands.
- 19. Write a C program to create two files with a set of values. Merge the two file contents to form a single file
- 20. Write a C program to pass the parameter using command line arguments.

zo: mile a o program to pace	the parameter deing command	inio digamento.		L

	On co	mpletion of the course, the studer	nts will be	able to					apping st Level
Course	CO1	Familiarize with the fundamentals and standards of engineering graphics.							
Outcomes	CO2	Perform drawing of basic geometric	cal constru	ictions ai	nd multip	ole views of	fobjects.	ŀ	₹2
CO3 Visualize the isometric and perspective sections of simple solids.							ŀ	K3	

Programme: B.Tech.

K4

K4

List of Experiments

Department

Study of capabilities of software for Drafting and Modeling – Coordinate systems (absolute, relative, polar, etc.) –Creation
of simple figures like polygon and general multi-line figures.

CO5 Correlate sectional views and lateral surface developments of various solids.

2. Drawing a Title Block with necessary text and projection symbol.

Mechanical Engineering

3. Drawing 2D sketch by applying modify tools like fillet, mirror, array, etc.,

CO4 Connect side view associate on front view.

- 4. Drawing front view and top view of simple solids like prism, pyramid, cylinder, cone, etc., and Dimensioning.
- 5. Drawing front view, top view and side view of objects from the given pictorial views (eg. Simple stool, V-block, Mixie Base).
- 6. Drawing a plan of residential building (Two bed rooms, kitchen, hall, etc.)
- 7. Drawing sectional views of prism, pyramid, cylinder, cone, etc,
- 8. Drawing lateral surface development of prism, pyramid, cylinder, cone, etc,
- 9. Drawing isometric projection of simple objects.
- 10. Creating 3D model of simple object and obtaining 2D multi-view drawings.
- 11. Note: Plotting of drawings must be made for each exercise and attached to the records written by Students.

Students shall choose an International certification course offered by the reputed organizations like Google, Microsoft, IBM, Texas Instruments, Bentley, Autodesk, Eplan and CISCO, etc. The duration of the course is 40-50 hours specified in the curriculum, which will be offered through Centre of Excellence.

Pass /Fail will be determined on the basis of participation, attendance, performance and completion of the course. If a candidate fails, he/she has to repeat the course in the subsequent years. Pass in this course is mandatory for the award of degree.

On completion of the course, the students will be able to CO1 Understand the basic of properties of magnetic, dielectric and superconductors. CO2 Identify the wave nature of the particles, physical significance of wave functions CO3 Understand the basic principles of laser and fiber optics communication K2 CO4 Understand and familiar with the water treatment. CO5 Understand the electrode potential for its feasibility in electrochemical reaction and uses of various batteries. CO6 Understand the specific operating condition under which corrosion occurs and suggest a method to control corrosion. SECTION A - PHYSICS UNIT-I Magnetic. Dielectric, and Superconducting Materials Periods: 8 Introduction to magnetic materials. Ferromagnetism- Domain theory-Types of energy-hysteresis-Hard and Soft magnetic materials-ferrities-Dielectric materials-Types of polarization - Langevin-Debye equation-Frequency effects on polarization-lelectric breakdown- Ferroelectric materials-Superconducting materials and their properties. UNIT-II Quantum Mechanics Periods: 7 Matter Waves - de Broglie Wavelength - Uncertainty Principle -Physical Significance of wave functions - Schrodinger wave Equation-Time Dependent - Time Independent - Application to Particle in a One Dimensional Box - Tunnel Didde. UNIT-II Laser and Filber Optics UNIT-II Laser and Filber Optics Periods: 7 Lasers - Principles of Laser - Spontaneous and Stimulated Emissions - Einstein's Coefficients - Population Inversion and Laser Action - components of laser - Types of Lasers - NdYAG, Co ₂ laser, GASA Laser Filber Optics - Principle and Propagation of light in optical fiber - Numerical aperture and acceptance angle - Types of optical fibers (materials, refractive index, mode) SECTION B - CHEMISTRY UNIT-IV Water and its Treatment Water: Sources and impurities, Water quality parameters: Definition and significance of-color, odour, turbidity, pH, ard water in boiler - Treatment of boiler feed water. Internal treatment (phosphate, colloidal, sodium aluminate		(Common to all Branches)

Course Name	Data Structures	3	-	-	3	25	75	100					
	(Commo	n to all Bra	nches)			i		i					
Prerequisite	Any Programming Knowledge												
Course	On completion of the course, the stude	nts will be	able to	•			BT M (Highe Level)						
Outcomes	CO1 Compute time and space complex	ty for given	probler	ทร			ŀ	(3					
	CO2 Demonstrate stack, queue and its	operation.					ŀ	(3					
	CO3 Illustrate the various operations of	linked list.					ľ	(3					
	CO4 Use the concepts of tree for variou	s applicatio	ns.				ŀ	(3					
	CO5 Outline the various Tables, Graphs	s and Sets	techniqu	ues.			ľ	(3					
UNIT-I	Basic Terminologies of Data Structure	S			Periods: 9								

Introduction: Basic Terminologies – Asymptotic Notations: Complexity analysis. Array and its operations - Searching: Linear Search and Binary Search Techniques. Sorting: Bubble Sort – Selection Sort – Insertion Sort – Heap Sort – Shell Sort. Performance and Comparison among the sorting methods.

UNIT-II Stack and Queue Operations

Periods: 9

Stacks and Queues: ADT Stack and its operations. Applications of Stacks: Expression Conversion and evaluation. ADT Queue and its operations. Types of Queue: Simple Queue – Circular Queue – Priority Queue – Deque.

UNIT-III Linked List Operations

Periods: 9

Linked Lists: Singly linked list: Representation in memory. Algorithms of several operations: Traversing – Searching – Insertion – CO3
Deletion. Linked representation of Stack and Queue. Doubly linked list: operations. Circular Linked Lists: operations.

UNIT-IV Trees Periods: 9

Trees: Basic Tree Terminologies. Different types of Trees: Binary Tree – Threaded Binary Tree – Binary Search Tree – Binary Tree CO4
Traversals – AVL Tree- Red Black Tree.

UNIT-V Graphs, Tables and Sets

nd Sets Periods: 9

Graph: Basic Terminologies and Representations – Graph traversal algorithms. Tables: Different types of tables – Hash Table and its operations - Applications. Sets: Representation of Sets- Operations and its applications.

CO5

Lecture Periods: 45 Tutorial Periods: Practical Periods: Total Periods: 45

Design process: Traditional design, Design thinking, Existing sample design projects, Study on designs around us, Compositions/structure of a design, Innovative design: Breaking of patterns, Reframe existing design problems, Principles of creativity Empathy: Customer Needs, Insight-leaving from the lives of others/standing on the shoes of others, Observation

Design team-Team formation, Conceptualization: Visual thinking, Drawing/sketching, New concept thinking, Patents and Intellectual Property, Concept Generation Methodologies, Concept Selection, Concept Testing, Opportunity identification Prototyping: Principles of prototyping, Prototyping technologies, Prototype using simple things, Wooden model, Clay model, 3D printing; Experimenting/testing.

Sustainable product design, Ergonomics, Semantics, Entrepreneurship/business ideas, Product Data Specification, Establishing target specifications, Setting the final specifications. Design projects for teams.

List of Lab Activities and Experiments

- 1. Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.
- 2. Machining of 3D geometry on soft material such as softwood or modelling wax.
- 3. 3D scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.
- 4. 2D profile cutting of press fit box/casing in acrylic (3 or 6 mm thickness)/cardboard, MDF (2 mm) board using laser cutter &
- 5. 2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.
- 6. Familiarity and use of welding equipment.
- 7. Familiarity and use of normal and wood lathe.
- Embedded programming using Arduino and/or Raspberry Pi.
- 9. Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.
- 10. Discussion and implementation of a mini project.

List of Exercises

- 1. Build a python program to implement Fibonacci series.
- 2. Build a python program to get a range of numbers from user and to separate even numbers and odd numbers respectively.
- 3. Build a function in Python to check duplicate letters. It must accept a string, i.e., a sentence. The function should return True if the sentence has any word with duplicate letters, else return False.
- 4. Build a program to perform arithmetic operations using lambda function.
- 5. Build a Python program that takes a list of numbers as input and returns a new list containing only the even numbers from the input list.
- 6. Build a python program to create a class called Car with attributes Company, model, and year. Implement a method that returns the age of the car in years.
- 7. Build a python program to create a base class called Shape that has a method called area which returns the area of the shape (set it to 0 for now). Then, create two derived classes Rectangle and Circle that inherit from the Shape class to calculate the area of derived classes.
- 8. Build a python program to implement aggregation using Numpy.
- 9. Build a python program to perform Indexing and Sorting.
- 10. Build a python program to perform Handling of missing data.
- 11. Build a python program to perform usage of Pivot table using Titanic datasets
- 12. Build a python program to perform use of eval () and query ()
- 13. Build a python program to perform Scatter Plot
- 14. Build a python program to perform 3D plotting
- 15 Implement an application to process a real time data

15. implement an application to	process a real time data.

Course Outcome	CO1 Analyse the algorithm's / program's efficiency in terms of time and space complexity.	К3								
	CO2 Solve the given problem by identifying the appropriate Data Structure.	K3								
	CO3 Solve the problems of searching and sorting techniques.	К3								
	CO4 Solve problems in linear Data Structures.	K4								
	CO5 Solve problems in non-linear Data Structures.	K4								

List of Experiments

- 1. Write a C program to implement recursive and non-recursive i) Linear search ii) Binary Search.
- 2. Write a C program to implement i) Bubble sort ii) Selection sort iii) Insertion sort iv) Shell sort v) Heap sort.
- 3. Write a C program to implement the following using an array. a) Stack ADT b) Queue ADT
- 4. Write a C program to implement list ADT to perform following operations a) Insert an element into a list. a) Delete an element from list b) Search for a key element in list c) count number of nodes in list.
- 5. Write a C program to implement the following using a singly linked list. a) Stack ADT b) Queue ADT.
- 6. Write a C program to implement the dequeue (double ended queue) ADT using a doubly linked list and an array.
- 7. Write a C program to perform the following operations:
 - a) Insert an element into a binary search tree.
 - b) Delete an element from a binary search tree.
 - c) Search for a key element in a binary search tree.
- 8. Write a C program that use recursive functions to traverse the given binary tree in
 - a) Preorder b) Inorder c) Postorder.
- 9. Write a C program to perform the AVL tree operations.
- 10. Write a C program to implement Graph Traversal Techniques.
- 11. Write a C program to implement the Set operations.
- 12. a) Union b) Intersection c) Difference.

Students shall choose an International certification course offered by the reputed organizations like Google, Microsoft, IBM, Texas Instruments, Bentley, Autodesk, Eplan and CISCO, etc. The duration of the course is 40-50 hours specified in the curriculum, which will be offered through Centre of Excellence.

Pass /Fail will be determined on the basis of participation, attendance, performance and completion of the course. If a candidate fails, he/she has to repeat the course in the subsequent years. Pass in this course is mandatory for the award of degree.
