

SRI MANAKULA VINAYAGAR ENGINEERING COLLEGE

(An Autonomous Institution)

Puducherry

B.TECH. ELECTRICAL AND ELECTRONICS ENGINEERING ACADEMIC REGULATIONS 2023 (R-2023)

CURRICULUM AND SYLLABI Volume – IV

COLLEGE VISION AND MISSION

Vision

To be globally recognized for excellence in quality education, innovation and research for the transformation of lives to serve the society.

Mission

M1: Quality Education:

To provide comprehensive academic system that amalgamates the cutting edge technologies with best practices.

M2: Research and Innovation:

To foster value based research and innovation in collaboration with industries and institutions globally for creating intellectuals with new avenues.

M3: Employability and Entrepreneurship:

To inculcate the employability and entrepreneurial skills through value and skill based training.

M4: Ethical Values:

To instill deep sense of human values by blending societal righteousness with academic professionalism for the growth of society.

DEPARTMENT VISION AND MISSION

Vision

To promote proficiency in the field of Electrical and Electronics Engineering by creating a stimulating environment for research, innovation and entrepreneurship

Mission

M1: Quality Education:

To impart high quality technical education with problem solving capabilities by innovative pedagogy in emerging technologies.

M2: Industrial and Societal Needs:

To cater the dynamic needs of the industry and society by strengthening industry-institute interaction.

M3: Research and Innovation:

To nurture the spirit of research attitude by carrying out innovative technologies pragmatically.

M4: Placement and Entrepreneurship:

To inculcate the professionalism in career by advancing synergetic skills to compete in the corporate world.

PROGRAMME OUTCOMES (POs)

PO1: Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis:

Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability:

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.

PO8: Ethics:

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning:

Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Professional Knowledge:

To possess strong educational foundation in Electrical and Electronics Engineering to attain successful career with professional responsibility

PEO2: Innovative Skills:

To enrich the skills to design and develop innovative solutions for engineering problems in a multidisciplinary environment

PEO3: Ethics:

To actively embrace leadership qualities for achieving professional goals with ethical values

PEO4: Adaptability:

To enhance intellectual competency along with technical skills by adapting to the current trends through eternal learning.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO1: Core Proficiency:

Utilize the engineering core knowledge to identify, formulate, design, and investigate the complex engineering problems of Power Electronics, Electrical Machines and Power Systems.

PSO2: Cutting Edge Technologies:

Explore the new cutting-edge technologies in the field of Electric Vehicle, Automation, Artificial Intelligence, Robotics and Renewable Energy to compete in global market

PSO3: Design and Evolution:

Capability to comprehend the technological advancements with the usage of modern design tools for analysing and designing systems to confront the rapid pace of industrial innovations.

STRUCTURE FOR UNDERGRADUATE ENGINEERING PROGRAMME

SI. No	Course Category	Breakdown of Credits
1	Humanities and Social Sciences including Management courses (HS)	15
2	Basic Science Courses (BS)	20
3	Engineering Science including workshop, drawing, basics of electrical / mechanical / computer etc. (ES)	24
4	Professional Core Courses (PC)	71
5	Professional Electives Courses (PE)	18
6	Open Electives Courses (OE)	09
7	Project Work and Internship (PA)	13
8	Ability Enhancement Courses (AEC*)	-
9	Mandatory Courses (MC*)	-
	Total	170

SCHEME OF CREDIT DISTRIBUTION – SUMMARY

10	10 Mandatory courses (MC*)		-	-	-	-	-	-	-	-
	Total			23	23	21	22	21	17	170

^{*} AEC and MC are not included for CGPA calculation

HONOUR / MINOR DEGREE PROGRAMME:

The student is permitted to opt for earning an Honour / Minor degree in the same discipline of engineering in addition to the degree in his/her own discipline. To earn an Honour / Minor degree the student is required to earn an additional 18 - 20 credits (over and above the total 170 credits prescribed in the curriculum) starting from fourth semester onwards by completing 5 additional courses offered in respective semesters. A student is eligible to exercise this option if he/she has passed all the courses offered upto third semester in the first attempt itself and has earned a CGPA / GPA* (*for lateral entry) of not less than 8.0. The prescribed courses offered for Honour / Minor degree are given in Annexure - IV

Open	Elective – III (Offered in Semester VII)		
1.	U23EEDC02	Electric and Hybrid Vehicles	EEE	ECE, ICE, MECH, CCE, BME, AI&DS, MECHATRONICS
2.	U23EEOC02	Energy Conservation and Management	EEE	ECE, ICE, MECH, CIVIL, CCE, BME, IT, CSE, AI&DS, MECHATRONICS
3.	U23ECOC03	IoT and its Applications	ECE	EEE, ICE, CSE, IT, MECH, CIVIL, CCE, FT
4.	U23ECOC04	RFID System Design and Testing	ECE	EEE, ICE, CSE, IT, MECH, CIVIL, CCE, BME, MECHATRONICS
5.	U23CSOC03	Web Programming	CSE	ECE, EEE, ICE, MECH, CIVIL, BME, MECHTRONICS
6.	U23CSOC04	Cloud Technology	CSE	ECE, EEE, ICE, MECH, CIVIL, BME, MECHTRONICS
7.	U23ITOC03	Essentials of Data Science	IT	EEE, ECE, ICE, CSE, MECH, CIVIL, CCE, BME, MECHATRONICS
	1	i .		<u> </u>

8.	U23ITOC04	Big Data Technologies	IT	EEE, ICE, MECH, CIVIL, CCE, BME
	02011 0001	Creativity Innovation		,,
9.	U23MEOC03	and New Product Development	MECH	EEE, ECE, ICE, CIVIL, BME, MECHATRONICS
10.	U23MEOC04	Supply Chain Management	MECH	EEE, ECE, CIVIL, MECHATRONICS
11.	U23CEOC03	Disaster Management	CIVIL	EEE, ECE, ICE, CSE, IT, MECH, BME, CCE, AI&DS
12.	U23CEOC04	Air Pollution and Solid Waste Management	CIVIL	EEE, ECE, ICE, CSE, IT, MECH, BME, CCE, AI&DS
13.	U23ICOC03	Fuzzy Logic and Neural Networks	ICE	CSE, IT, MECH,CSBS, AI&DS, MECHATRONICS
14.	U23ICOC04	Industrial Automation	ICE	ECE, CSE, IT, MECH,CCE, CSBS, AI&DS
15.	U23BMOC03	Medical Robotics	BME	EEE, ECE, CSE, IT, ICE, CCE, MECH, AI&DS, MECHATRONICS
16.	U23BMOC04	Tele health Technology	BME	EEE, ECE, ICE, CCE
17.	U23CCOC03	Web App Development	CCE	EEE, ECE, ICE, CSE,IT, MECH, CIVIL, BME, AI&DS, MECHATRONICS
18.	U23CCOC04	Network Essentials and Security	CCE	EEE, ICE, CSE, IT, MECH, CIVIL, BME, AI&DS, MECHATRONICS,
19.	U23CBOC03	Engineering Economics	CSBS	EEE, ECE, ICE, CSE, IT, MECH, CIVIL, BME, AIDS, CCE, FT, MECHATRONICS,
20.	U23CBOC04	Conversational Al	CSBS	EEE, ECE, ICE, MECH, CIVIL, BME, MECHATRONICS
21.	U23ADOC03	Data science Application of Vision	AI&DS	EEE, ECE, ICE, CSE, IT, MECH, CIVIL, CCE
22.	U23ADOC04	Artificial Intelligence Applications	AI&DS	EEE, ECE, ICE, CSE, IT, MECH, CIVIL, CCE, BME, MECHATRONICS
23.	U23MCOC03	Non-Destructive Testing	MCTR	EEE, ECE, ICE, MECH
24.	U23MCOC04	Robots and Systems in Smart Manufacturing	MCTR	EEE, ECE, ICE, MECH
25.	U23FTOC03	Fundamentals of Fashion Design	FT	EEE, ECE, ICE, CSE, IT, MECH, CIVIL, CCE, BME, AI&DS, MECHATRONICS
26.	U23FTOC04	Pattern Making	FT	EEE, ECE, ICE, CSE, IT, MECH, CIVIL, CCE, BME, AI&DS, MECHATRONICS

Annexure - III

ABILITY ENHANCEMENT COURSES - (A) CERTIFICATION COURSES

S. No	Course Code	Course Title
1	U23EECX01	Adobe Photoshop
2	U23EECX02	Adobe Animate
3	U23EECX03	Adobe Dreamweaver
4	U23EECX04	Adobe After Effects
5	U23EECX05	Adobe Illustrator
6	U23EECX06	Adobe InDesign
7	U23EECX07	Autodesk AutoCAD -ACU
8	U23EECX08	Autodesk Inventor - ACU
9	U23EECX09	Autodesk Revit - ACU
10	U23EECX10	Autodesk Fusion 360 - ACU
11	U23EECX11	Autodesk 3ds Max - ACU
12	U23EECX12	Autodesk Maya - ACU
13	U23EECX13	Cloud Security Foundations
14	U23EECX14	Cloud Computing Architecture
15	U23EECX15	Cloud Foundation
16	U23EECX16	Cloud Practitioner
17	U23EECX17	Cloud Solution Architect
18	U23EECX18	Data Engineering
19	U23EECX19	Machine Learning Foundation
20	U23EECX20	Robotic Process Automation / Medical Robotics
21	U23EECX21	Advance Programming Using C
22	U23EECX22	Advance Programming Using C ++
23	U23EECX23	C Programming
24	U23EECX24	C++ Programming
25	U23EECX25	CCNP Enterprise: Advanced Routing
26	U23EECX26	CCNP Enterprise: Core Networking
27	U23EECX27	Cisco Certified Network Associate - Level 2
28	U23EECX28	Cisco Certified Network Associate- Level 1
29	U23EECX29	Cisco Certified Network Associate- Level 3
30	U23EECX30	Fundamentals Of Internet of Things
31	U23EECX31	Internet Of Things / Solar and Smart Energy System with IoT
32	U23EECX32	Java Script Programming
33	U23EECX33	NGD Linux Essentials
34	U23EECX34	NGD Linux I
35	U23EECX35	NGD Linux II
36	U23EECX36	Advance Java Programming

38 U23EECX38 Angular JS 39 U23EECX40 Cotate 40 U23EECX40 Communication Skills for Business 41 U23EECX41 Corral Draw 42 U23EECX42 Data Science Using R 43 U23EECX43 Digital Marketing 44 U23EECX44 Embedded System With IOT / Arduino 45 U23EECX45 Embedded System with IOT / Arduino 46 U23EECX47 Plixis 47 U23EECX47 Plixis 48 U23EECX48 Sketch Up 49 U23EECX50 Foundation Of Stock Market Investing 51 U23EECX51 Machine Learning / Machine Learning for Medical Diagnosis 52 U23EECX51 Creo (Modelling & Simulation) 53 U23EECX53 Creo (Modelling & Simulation) 54 U23EECX54 Soft Skills, Verbal, Aptitude 55 U23EECX55 Software Testing 56 U23EECX56 MX-Road 57 U23EECX56 Solid works 59 U23EECX	37	U23EECX37	Android Programming / Android Medical App Development

Semester	1/11		Course	Course Category: ES End Semester Exan										
Course Code	HOSE	SDC02	Pe	riods/W	eek	Credit	Maxi	mum Ma	ıum Marks					
Course Code	UZSE	SPC02	L	Т	Р	С	CAM	ESE	TM					
Course Name	DESI	GN THINKING AND IDEA LAB	0	0	2	1	50	50	100					
		(Common t	o all Branc	hes)					•					
Prerequisite	Basic	Knowledge of Science	inowledge of Science											
	On co	n completion of the course, the students will be able to												
	CO1	Demonstrate a comprehensive understanding of the tools and inventory associated with the IDEA Lab.												
	CO2	Develop proficiency in ideation techniques to generate creative and innovative solutions for various design challenges and problems												
Course Outcomes	СОЗ		Acquire practical knowledge of mechanical and electronic fabrication processes, including hands-on experience with machinery, tools, and techniques used in the manufacturing and assembly of physical components.											
	CO4	Cultivate the skills necessary for development the ability to integrate user needs, madesign process.							K4					
	CO5	Apply iterative design methodologies to user testing, and evaluation of function					eedback,		K4					

List of Experiments:

Design process: Traditional design, Design thinking, Existing sample design projects, Study on designs around us, Compositions/structure of a design, Innovative design: Breaking of patterns, Reframe existing design problems, Principles of creativity Empathy: Customer Needs, Insight-leaving from the lives of others/standing on the shoes of others, Observation

Design team-Team formation, Conceptualization: Visual thinking, Drawing/sketching, New concept thinking, Patents and Intellectual Property, Concept Generation Methodologies, Concept Selection, Concept Testing, Opportunity identification Prototyping: Principles of prototyping, Prototyping technologies, Prototype using simple things, Wooden model, Clay model, 3D printing; Experimenting/testing.

Sustainable product design, Ergonomics, Semantics, Entrepreneurship/business ideas, Product Data Specification, Establishing target specifications, Setting the final specifications. Design projects for teams.

- 1. Schematic and PCB layout design of a suitable circuit, fabrication and testing of the circuit.
- 2. Machining of 3D geometry on soft material such as softwood or modelling wax.
- 3. 3D scanning of computer mouse geometry surface. 3D printing of scanned geometry using FDM or SLA printer.
- 4. 2D profile cutting of press fit box/casing in acrylic (3 or 6 mm thickness)/cardboard, MDF (2 mm) board using laser cutter & engraver.
- 5. 2D profile cutting on plywood /MDF (6-12 mm) for press fit designs.
- 6. Familiarity and use of welding equipment.
- 7. Familiarity and use of normal and wood lathe.
- 8. Embedded programming using Arduino and/or Raspberry Pi.
- 9. Design and implementation of a capstone project involving embedded hardware, software and machined or 3D printed enclosure.
- 10. Discussion and implementation of a mini project.
- 11. Documentation of the mini project (Report and video).

Prerequisite	Physi	cs						
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)					
	CO1	CO1 Acquire knowledge on safety protocols and procedures for working with electricity.						
Course	CO2 Gain hands on experience in using various electrical tools and equipments.							
Outcomes	СОЗ	Develop skills in designing line diagram and construct wiring for domestic and industrial applications.	K4					
	CO4 Use protection circuits for electrical networks and measure insulation resistance usi megger.							
	CO5	Analyze and troubleshoot the electrical circuits of various domestic appliances.	K4					

List of Experiments:

- 1. Study of electrical tools, accessories, joints, symbols and safety precautions.
- 2. Study of different types of Fuses, Circuits breakers, AC and DC meters.
- 3. Testing of series and parallel lamp circuits.
- 4. Domestic Wiring Practice
 - a. Staircase wiring
 - b. Doctor's room wiring
 - c. Bed room wiring
 - d. Godown wiring
 - e. Ceiling fan, LED Lamps and Iron box.
- 5. Design of Domestic power distribution.
- 6. Estimation of material requirement for Residential building/Flat wiring
- 7. Estimation of material requirement for industrial wiring
- 8. Measurement of Insulation resistance using Megger.
- 9. Characteristics of Incandescent lamp and CFL.
- 10. To study and measure the inductance of choke coil.
- 11. Study of Electric shock phenomenon, precautions, preventions and earthing
- 12. Study and Troubleshooting of electrical equipments (Fan, Iron box, Mixer)

Prerequisite	Physics								
	On completion of the course, the students will be able to								
	CO1	K4							
Course	CO2	Design and implement clippers, clampers, rectifiers and regulator circuits using diodes.	K 3						
Outcomes	CO3	Analyze the characteristics of photodiodes, LEDs and able to investigate their behavior under different operating conditions.	K3						
	CO4	Gain knowledge in design and implemention of digital logic circuits in order to validate their functionality.	K3						
	CO5	Develop skills to simplify the hardware requirements of digital circuits for real time applications.	K4						

List of Experiments:

- 1. V-I characteristics of PN junction diode.
- 2. Clipping and clamping circuits.
- 3. Half wave and full wave rectifier circuits with and without filters.
- 4. V-I characteristics of zener diode and design of voltage regulator circuits.
- 5. Input and output characteristics of BJT for CB, CC and CE configurations.
- 6. Design of biasing circuits for BJT.
- 7. Transfer and drain characteristics of JFET and MOSFET.
- 8. V I characteristics of SCR and TRIAC.
- 9. V I characteristics of Photodiode and LED.
- 10. Study and implementation of logic gates and verification of De Morgan laws using basic gates.
- 11. Design and verification of adder and Subtractor.
- 12. Design and verification of Encoder and Decoder.
- 13. Design of Multiplexer and Demultiplexer using gates and ICs.
- 14. Design of Parity generator and Checker using gates and ICs.
- 15. Design of Code Converters: BCD to Binary, Binary to BCD using logic gates.
- 16. Design of BCD to Seven Segment Display using ICs.

Course Name	ENGI AUTO	NEERING GRAPHICS USING OCAD	0	0	2	1	50	50	100			
		(Common	to all Brand	ches)								
Prerequisite	Nil											
	On co	ompletion of the course, the stude	ents will be	able to				BT Ma (Highest				
	CO1	Familiarize with the fundamentals and	standards of	f enginee	ring grap	hics.		BT Map (Highest I K3 K2				
Course	CO2	Perform drawing of basic geometrical	constructions	s and mu	ltiple viev	ws of objects	j.		K2			
Outcomes	CO3	Visualize the isometric and perspective	e sections of	simple s	olids.				K 3			
	CO4	Connect side view associate on front	view.						K4			
	CO5	Correlate sectional views and lateral s	urface devel	onments	of variou	s solids			KΔ			

List of Experiments:

- 1. Study of capabilities of software for Drafting and Modeling Coordinate systems (absolute, relative, polar, etc.) Creation of simple figures like polygon and general multi-line figures.
- 2. Drawing a Title Block with necessary text and projection symbol.
- 3. Drawing 2D sketch by applying modify tools like fillet, mirror, array, etc.,
- 4. Drawing front view and top view of simple solids like prism, pyramid, cylinder, cone, etc., and Dimensioning.
- 5. Drawing front view, top view and side view of objects from the given pictorial views (eg. Simple stool, V-block, Mixie Base).
- 6. Drawing a plan of residential building (Two bed rooms, kitchen, hall, etc.)
- 7. Drawing sectional views of prism, pyramid, cylinder, cone, etc,
- 8. Drawing lateral surface development of prism, pyramid, cylinder, cone, etc,
- 9. Drawing isometric projection of simple objects.
- 10. Creating 3D model of simple object and obtaining 2D multi-view drawings.

Note: Plotting of drawings must be made for each exercise and attached to the records written by Students.

Course Name	PROGRAMMING IN C LABORATORY	0	0	2	1	50	50	100
	(Common to	all Branc	hae)					***************************************

(Common to all Branches)

Prerequisite	Nil		
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)
	CO1	Implement logical formulations to solve simple problems leading to specific applications.	K3
Course Outcomes	CO2	Execute C programs for simple applications making use of basic constructs, arrays and strings.	К3
Outcomes	CO3	Experiment C programs involving functions, recursion, pointers, and structures.	K3
	CO4	Demonstrate applications using sequential and random-access file processing.	К3
	CO5	Build solutions for online coding challenges.	К3

List of Experiments:

- 1. Write a C program to find the Area of the triangle.
- 2. Develop a C program to read a three-digit number and produce output like
 - 1 hundreds
 - 7 tens
 - 2 units

For an input of 172.

- 3. Write a C program to check whether a given character is vowel or not using Switch Case statement.
- 4. Write a C program to print the numbers from 1 to 10 along with their squares.
- 5. Demonstrate do-While loop in C to find the sum of 'n' numbers.
- 6. Find the factorial of a given number using Functions in C.
- 7. Write a C program to check whether a given string is palindrome or not?
- 8. Write a C program to check whether a value is prime or not?
- 9. Develop a C program to swap two numbers using call by value and call by reference.
- 10. Construct a C program to find the smallest and largest element in an array.
- 11. Implement matrix multiplication using C program.
- 12. Write a C program to perform various string handling functions like strlen, strcpy, strcat, strcmp.
- 13. Develop a C program to remove all characters in a string except alphabets.
- 14. Write a C program to find the sum of an integer array using pointers.
- 15. Write a C program to find the Maximum element in an integer array using pointers.
- 16. Construct a C program to display Employee details using Structures
- 17. Write a C program to display the contents of a file on the monitor screen.
- 18. Write a File by getting the input from the keyboard and retrieve the contents of the file using file operation commands.
- 19. Write a C program to create two files with a set of values. Merge the two file contents to form a single file
- 20. Write a C program to pass the parameter using command line arguments.

Course Code	UZSE	EP203	L	Т	Р	С	CAM	ESE	TM
Course Name	ELEC	TRONICS II LABORATORY	0	0	2	1	50	50	100
			EEE				•		
Prerequisite	Elect	ronics I Laboratory							
	On co	ompletion of the course, the stude	nts will be	able to					lapping est Level)
	CO1	Analyze frequency response of the tran	nsistor ampli	ifiers and	the cond	ept of band	width.		K4
0	CO2	Design and implement multivibrator cir	cuits for PW	M and clo	ck gene	ration.			K 3
Course Outcomes	СОЗ	Implement oscillator circuits for signal components.	generation a	ınd swee _l	o circuits	for testing 6	electronic	•	K3
	CO4	Develop proficiency in utilizing flip fle sequential logic circuits for various digi			ign and	implementa	ation of		K4
	CO5	Acquire the skills to construct shift redigital circuits.	egisters for	efficient	storage	and shifting	of datas ir	1	K4

List of Experiments:

- 1. Design and analysis of frequency response characteristics of common emitter BJT amplifier.
- Implementation of two stage RC coupled CE amplifier.
- 3. Design and implementation of Schmitt trigger.
- 4. Design and implementation of Astable Multivibrator.
- Design and implementation of Monostable Multivibrator. 5.
- 6. Implementation of a Sweep Circuit.
- Design and implementation of RC phase shift oscillator. 7.
- Design and implementation of Wien bridge oscillator.
- Implementation of SR, D, JK and T flip-flops using universal gates.
- 10. Design and implementation of 4-bit shift registers in SISO, SIPO, PISO and PIPO modes using ICs.
- 11. Design and implementation of synchronous Counters using ICs.
- 12. Design and implementation of Asynchronous Counters using ICs.
- 13. Implementation of Ring and Johnson counters using ICs.

	El	EE	. <u></u>	. <u>.</u>				
Prerequisite	-							

Students shall choose an international certification course offered by the reputed organizations like Google, Microsoft, IBM, Texas Instruments, Bentley, Autodesk, Eplan and CISCO, etc. The duration of the course is 40-50 hours specified in the curriculum, which will be offered through Centre of Excellence.

Pass / Fail will be determined on the basis of participation, attendance, performance and completion of the course. If a candidate Fails, he/she has to repeat the course in the subsequent years. Pass in this course is mandatory for the award of degree.

(Common to ALL Branches except CSBS)

Prerequisite	Mat	rices, Fourier Transforms, Laplace Transforms	
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)
	CO1	Perform and evaluate Matrix Operations	К3
Course	CO2	Solve Differential and Integral Equations	К3
Outcomes	CO3	Construct Fourier series and Fourier Transforms of the given function	K3
	CO4	Find the Measures of Central tendency	K3
	CO5	Analyze Correlation and Regression lines	К3

List of Experiments:

- 1. Find the Inverse, Rank, Eigen values and Eigen Vectors of the matrix.
- 2. Solve the first order differential equation.
- 3. Find the integration of $\int_a^b f(x)dx$
- 4. Find the Fourier series of f(x).
- 5. Find the Fourier Transform of f(x).
- 6. Find the Laplace Transform of f(x).
- 7. Find the Mean, Median and Mode.
- 8. Construct the Pie and Bar Diagram.
- 9. Find the Correlation coefficient.
- 10. Find the Regression lines.

Course Code	UZSADFCUI	L	Т	Р	С	CAM		TM	
Course Name	PROGRAMMING IN PYTHON LABORATORY	0	0	2	1	50	50	100	
	(Common to	ΔII Bran	ches)				. <u></u>		

Prerequisite	Nil		
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)
	CO1	Describe common Python functionality and features used for data science.	К3
Course	CO2	Query Data Frame structures for cleaning and processing.	К3
Outcomes	CO3	Configure your programming environment	K3
	CO4	Experiment the concept using data visualization.	К3
	CO5	Analyze real time datasets.	K3

List of Experiments:

- Build a python program to implement Fibonacci series. 1.
- 2. Build a python program to get a range of numbers from user and to separate even numbers and odd numbers respectively.
- Build a function in Python to check duplicate letters. It must accept a string, i.e., a sentence. The function should return True if the sentence has any word with duplicate letters, else return False.
- 4. Build a program to perform arithmetic operations using lambda function.
- Build a Python program that takes a list of numbers as input and returns a new list containing only the even numbers from the input list.
- 6. Build a python program to create a class called Car with attributes Company, model, and year. Implement a method that returns the age of the car in years.
- 7. Build a python program to create a base class called Shape that has a method called area which returns the area of the shape (set it to 0 for now). Then, create two derived classes Rectangle and Circle that inherit from the Shape class to calculate the area of derived classes.
- 8. Build a python program to implement aggregation using Numpy.
- Build a python program to perform Indexing and Sorting.
- 10. Build a python program to perform Handling of missing data.
- 11. Build a python program to perform usage of Pivot table using Titanic datasets
- 12. Build a python program to perform use of eval () and query ()
- 13. Build a python program to perform Scatter Plot
- 14. Build a python program to perform 3D plotting
- 15. Implement an application to process a real time data.

	CO1	Test the performance of DC machines and transformers by conducting suitable experiments	K 3
Course Outcomes	CO2	Predetermine the different performance characteristics of DC machines and transformers.	К3
Catcomes	CO3	Analyze the various speed control techniques and electrical braking of DC shunt motor.	K3
	CO4	Infer the load sharing of single-phase transformers by parallel operation.	К3

Experiment the performance of DC machine for various applications.

List of Experiments:

DC Machines

1. Load test on DC Series Motor

CO₅

- 2. Load test on DC Shunt / Compound Motor
- 3. Speed control of DC Shunt Motors: Field control, Armature control
- 4. Open Circuit Characteristics and Load test on self / separately excited DC Generator
- 5. Load test on DC series Generator
- 6. Swinburne's Test
- 7. Electrical Braking in DC shunt motor
- 8. Assembling and Testing of DC machines

Transformers

- 9. Load test on single phase transformer
- 10. O.C and S.C test on single phase transformer
- 11. Parallel operation of single phase transformers
- 12. Load test on three phase transformer
- 13. O.C and S.C test on three phase transformer

EEE

(Choose anyone of the below three courses)

1. TESTING OF ELECTRONIC DEVICES AND PCB BOARD DESIGNING

Course Contents:

Testing of Electronics Devices:

- 1. Identification of components and its symbols
- 2. Testing of semiconductor devices (Diodes, BJT, SCR, DIAC, TRIAC, MOSFET and IGBT)
- 3. Testing of multimeter, function generator and regulated power supply
- 4. Identification and testing of resistors, capacitors and inductors

PCB -Through Hole Technology Mounting (THT):

- 5. Schematic capture of Electronic Circuits and PCB Design
- 6. Fabrication of PCB for Clapping and IR switching circuits
- 7. Fabrication of PCB for cell, battery and mobile charger

PCB - Surface Mount Technology:

- 8. Calculation of Surface mounts device (SMD) resistor values.
- 9. Identification and testing of SMD Components (Capacitor, Fuse, Coil, Diode, Transistor and Crystals)
- 10. Practice of SMT Integrated Circuits-package types (SOIC, SOP, QFP, PLCC and BGA)
- 11. Practice of different SMT solder joints and soldering methods
- 12. Assembling Process of SMT
- 13. Design and implementation of Microcontroller Development board using SMT

2. DESIGN OF SOLAR POWER PLANT AND INSTALLATION

Course Contents:

- 1. Familiarization of Subsidy scheme for Solar Photovoltaic in Urban sector, water pumping system and house rooftop.
- 2. Selection of PV module technology
- 3. Design of solar PV system for fan and LED lamps.
- 4. Connection of PV Module (Series and Parallel Circuit)
- 5. Preparation of single line diagram and plant array layout diagram.
- 6. Calculation of battery capacity for household appliance
- 7. Selection and sizing of Inverter and controller
- 8. Selection and sizing of AC and DC Cables
- 9. Net Metering and Introduction to Smart grid
- 10. Cost estimation and payback period calculation for solar power plant

3. DEMONSTRATION / TROUBLESHOOTING OF ELECTRICAL AND ELECTRONICS EQUIPMENTS

Course Contents:

- 1. Demonstration of electrical safety and electricity tariff calculation for household appliances.
- 2. Single phase house wiring, Fuse calculation and Extension box fitting
- 3. Demonstration of electrical measuring instruments (Ammeter, Voltmeter, CRO, DSO and Multimeter)
- 4. a) Electrical wiring for fan and tube light
 - b) Demonstration of coil rewinding of ceiling fan
- 5. Troubleshooting of electrical and electronic home appliances (Electric water heater, Iron box)
- 6. Troubleshooting of electrical and electronic home appliances (Rice cooker, Vacuum cleaner)
- 7. Troubleshooting of electrical and electronic home appliances -(Washing machine, Mixer)
- 8. Troubleshooting of electrical and electronic home appliances-(Air conditioner, Grinder)
- 9. Troubleshooting of electrical and electronic home appliances- Induction stove
- 11. Demonstration of water level indicator for domestic purpose.
- 12. Troubleshooting Steps for Common TV Problems
- 13. Construction of series and parallel connection of LED for decoration purpose.
- 14. Demonstration and design of inductive coil for required specification

Course	CO2	Solve the given problem by identifying t	he appropri	ate Data	Structure	Э.			K 3		
Outcomes CO3 Solve the problems of searching and sorting techniques.									K3		
	CO4	Solve problems in linear Data Structure	S.						K4		
	CO5	Solve problems in non-linear Data Structures.									

List of Experiments:

- 1. Write a C program to implement recursive and non-recursive i) Linear search ii) Binary Search.
- 2. Write a C program to implement i) Bubble sort ii) Selection sort iii) Insertion sort iv) Shell sort v) Heap sort.
- 3. Write a C program to implement the following using an array. a) Stack ADT b) Queue ADT
- 4. Write a C program to implement list ADT to perform following operations a) Insert an element into a list. a) Delete an element from list b) Search for a key element in list c) count number of nodes in list.
- 5. Write a C program to implement the following using a singly linked list. a) Stack ADT b) Queue ADT.
- 6. Write a C program to implement the dequeue (double ended queue) ADT using a doubly linked list and an array.
- 7. Write a C program to perform the following operations:
 - a) Insert an element into a binary search tree.
 - b) Delete an element from a binary search tree.
 - c) Search for a key element in a binary search tree.
- 8. Write a C program that use recursive functions to traverse the given binary tree in
 - a) Preorder b) Inorder c) Postorder.
- 9. Write a C program to perform the AVL tree operations.
- 10. Write a C program to implement Graph Traversal Techniques.
- 11. Write a C program to implement the Set operations.
 - a) Union b) Intersection c) Difference

		EEE										
Prerequisite	Electr	trical Engineering, Electrical Machines										
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)									
	CO1	Assess the performance of induction and synchronous machines by conducting suitable experiments.	K5									
Course	CO2	Predetermine the performance characteristics of a three-phase induction motor.	K3									
Outcomes	CO3	Analyse the various strategies for controlling speed and electrical braking systems for induction motors.	K4									
	CO4	Examine the performance of Universal motor by conducting suitable test.	K4									
	CO5	Develop prototype modules in Induction and Synchronous machines for various applications.	K6									

List of Experiments:

- 1. Load test on single phase induction motor
- 2. Load test on three phase squirrel cage / slip ring induction motor
- 3. No load and blocked rotor tests on three phase induction motor and separate it's no load losses.
- 4. Speed control of slip ring induction motor
 - (i). Stator voltage control
 - (ii). Rotor resistance control
- 5. Load test on induction generator
- 6. Load test on Single phase alternator
- 7. Voltage regulation of alternator using EMF and MMF methods
- 8. Voltage regulation of alternator using ZPF method
- 9. Slip test on three phase salient pole alternator
- 10. V and inverted V curves of synchronous motor
- 11. Performance Characteristics of Universal Motor
- 12. Electrical Braking of Induction Motor (i) Dynamic Braking, (ii) Plugging (iii) Regenerative Braking
- 13. Assembling and Testing of AC machines

FFF									

Prerequisite	Electro	Electronics									
	On co	ompletion of the course, the students will be able to	BT Mapping (Highest Level)								
	CO1	Demonstrate the application circuits like ADC, DAC and amplifiers using OPAMP.	К3								
Course	CO2	Experiment various waveform generation circuits using OPAMP.	К3								
Outcomes	CO3	Design and test regulator circuits for power supplies using voltage regulator ICs	K6								
	CO4	Determine the frequency response of active filters.	K3								
	CO5	Illustrate the output waveforms and timing characteristics of multivibrator circuits using IC555.	K4								

List of Experiments:

- 1. Determination of DC characteristics of OPAMP 741.
- 2. Design and verification of Inverting, non-inverting amplifiers and Voltage follower using OPAMP 741.
- 3. Design and verification of Adder and Subtractor using OPAMP 741.
- 4. Design and verification of Integrator and Differentiator using OPAMP 741.
- 5. Design and verification of V to I converter and I to V converter using OPAMP 741.
- 6. Design and verification of Instrumentation amplifier and comparator circuits using OPAMP 741.
- 7. Design and verification of wein-bridge oscillator using OPAMP 741.
- 8. Design and verification of RC phase shift oscillator using OPAMP 741.
- 9. Design and analysis of Triangular wave generator using OPAMP 741.
- 10. Design and analysis of filter circuit (First order& Second order) using OPAMP 741.
- 11. Design and analysis of voltage regulators using
 - a) Fixed Voltage Regulator LM7805
 - b) Adjustable Voltage Regulator LM317
- 12. Design and verification of low and high voltage regulators using IC 723.
- 13. Design and analysis of Monostable and Astable multivibrator using IC555.

EEE

(Choose anyone of the below three courses)

1. MOBILE PHONE SERVICING

Course Contents:

- 1. Fundamentals of Mobile Phone Technology.
- 2. Addressing Mobile phone charging issues.
- 3. Assembling and disassembling of various models of mobile phones.
- 4. Practice of various tools and equipment used in mobile phone repairs.
- 5. Practice of Printed Circuit Board (Motherboard) and various components on PCB.
- 6. Reheating and mounting of various BGA and SMD chips.
- 7. Addressing Phone Freezing or Apps Crashing issues.
- 8. Introduction of various flasher boxes and software.
- 9. Unlocking of handsets through codes or software.
- 10. Water damaged repair techniques.
- 11. Addressing Quick Battery Drain problem
- 12. Addressing Overheating problem

2. AUTONOMOUS ROBOTICS

Course Contents:

- 1. Introduction, features and applications to Robotics
- 2. Building the PC Controlled Robot
- 3. Programming the PC Controlled Robot
- 4. Building the Line Follower Robot
- 5. Programming and testing of Line Follower Robot
- 6. Building the Obstacle Avoiding Robot
- 7. Programming and testing of Obstacle Avoiding Robot
- 8. Building the Pit Avoiding Robot
- 9. Programming and testing of Pit Avoiding Robot
- 10. Building the Light Following Robot
- 11. Programming and testing of Light Following Robot

3. REPAIR AND MAINTENANCE OF POWER SUPPLY, INVERTER AND UPS

Course Contents:

- 1. Practice of appropriate repair tools and Equipments
- 2. Identify, place, solder, de-solder and test different SMD discrete components
- 3. Rework on PCB after identifying defects from SMD soldering and de-soldering
- 4. Identify different front panel controls and connectors of the given power supply.
- 5. Open the power supply and identify major sections and power components with heat sinks.
- 6. Identify various input and output sockets/ connectors of the given SMPS and measure its outputs using a multimeter
- 7. Identify and replace the faulty components in SMPS used in TVs and PCs
- 8. Identify front panel control and indicators of Inverter and also understand the use of back panel sockets and connections.
- 9. Testing of battery mode (Battery Inverter Load) in interconnected system
- 10. Open Top cover and identify various circuit boards in Inverter and also monitor voltages at various test points.
- 11. Troubleshooting of inverter
- 12. Identify front and back panel control, indicators, sockets and connections of UPS
- 13. Identify various circuit boards in UPS and monitor voltages at various test points
- 14. Troubleshooting of UPS
- 15. Calculation of C rating of battery

	CO5	Implement Graphical User Interface ba features and Swing in Java.	ement Graphical User Interface based application programs by utilizing event handling ures and Swing in Java.											

List of Exercises:

- 1. Develop simple programs using java
- 2. Develop a java program that implements class and object.
- 3. Write a java program to find the frequency of a given character in a string
- 4. Write a java program to demonstrate inheritance and interfaces.
- 5. Develop a java program that implements the Packages.
- 6. Create java applications using Exception Handling for error handling.
- 7. Develop a simple real life application program to illustrate the use of Multi-Threads.
- 8. Implement simple applications using Collections.
- 9. Develop application using the concept of I/O Streams
- 10. Write a Java Program to demonstrate AWT and Swing Components
- 11. Develop a simple application and use JDBC to connect to a back-end database.

	CO1	Develop assembly language program for	or micropro	cessor 8	085.				K 3			
Course	CO2	Design and implement embedded syste	em applicat	ions usin	g PIC mi	crocontrolle	-		K4			
Outcomes	CO3 Analyze and interface different peripherals with microcontrollers for real-time applications K3											
	CO4	Demonstrate the use of on-chip peripherals for efficient data processing and control.										
	CO5	Interface ARM7 Processor and Raspberry Pi with external Peripheral devices										

List of Experiments:

Microprocessor Experiments using 8085:

- 1. 8 bit Addition, Subtraction, Multiplication and Division
- 2. Assembly Language Programming: Subroutines, parameter passing to subroutines

Microcontroller Experiments using PIC:

- 3. a) Timer to generate accurate delay
 - b) Timer to generate waveforms
- 4. Seven Segment LED Display interfacing
- 5. a) 16x2 LCD interfacing
 - b) 4x4 matrix keyboard interfacing
- 6. DC Motor Interfacing with forward and reverse operation
- 7. Stepper motor interfacing
- 8. Relay interfacing
- 9. PIC on-chip ADC for interfacing analog sensors

Microcontroller Experiments using ARM7:

- 10. Interfacing with PC via UART interface
- 11. Interfacing of PWM based LED lighting board
- 12. ARM7 on-chip DAC interfacing

Microprocessor Experiments using Raspberry Pi:

13. Study on Raspberry Pi

	СОЗ	CO3 Apply the acquainted skills to develop final model / system											

There shall be a Micro Project, which the student shall pursue as a team consists of maximum 4 students during the third year, fifth semester. The aim of the micro project is that the student has to understand the real time hardware / software applications. The student should gain a thorough knowledge in the problem he/she has selected and in the hardware / software he/she using in the Project. The Micro-project is an application that should be formally initiated and should be developed and also to be implemented by the respective team.

The Micro Project shall be submitted in a report form along with the hardware model / software developed, duly approved by the department internal evaluation committee. It shall be evaluated for 100 marks as Continuous Assessment. The department internal evaluation committee shall consist of faculty coordinator, supervisor of the project and a senior faculty member of the department. There shall be two reviews that will be considered for assessing a Micro Project work with weightage as indicated evaluation Methods.

Course Name	CERTIFICATION COURSE - V	0	0	4	-	100	-	100		
Course Name	CERTIFICATION COURSE - V	0	0	4	-	100	-	<u> </u>		
Prerequisite	-									

Students shall choose an International / Reputed organization certification course of 40-50 hours duration specified in the curriculum (It is mandatory to do a minimum of six courses) which will be offered through the Centre of Excellence. These courses have no credit and will not be considered for CGPA calculation.

- (i) Certification Courses are required to be completed to fulfil the degree requirements. All Certification courses are assessed internally for 100 marks.
- (ii) The Course coordinator handling the course will assess the student through attendance and MCQ test, and declare the student as "pass" on satisfactory completion. A letter grade "P" is awarded to declare pass.
- (iii) The marks scored in these courses will not be taken into consideration for the SGPA / CGPA calculations in the grade sheet.

There shall be a Mini Project, which the student shall pursue as a team consists of maximum 4 students during the third year, fifth semester. The aim of the mini project is that the student has to understand the real time hardware / software applications. The student should gain a thorough knowledge in the problem he/she has selected and in the hardware / software he/she using in the Project. The Mini-project is an application that should be formally initiated and should be developed and also to be implemented by the respective team.

The Mini Project shall be submitted in a report form along with the hardware model / software developed, duly approved by the department internal evaluation committee. It shall be evaluated for 100 marks as Continuous Assessment. The department internal evaluation committee shall consist of faculty coordinator, supervisor of the project and a senior faculty member of the department. There shall be two reviews that will be considered for assessing a Mini Project work with weightage as indicated evaluation Methods.

EEE												
Prerequisite	-											

Students shall choose an International / Reputed organization certification course of 40-50 hours duration specified in the curriculum (It is mandatory to do a minimum of six courses) which will be offered through the Centre of Excellence. These courses have no credit and will not be considered for CGPA calculation.

- (i) Certification Courses are required to be completed to fulfil the degree requirements. All Certification courses are assessed internally for 100 marks.
- (ii) The Course coordinator handling the course will assess the student through attendance and MCQ test, and declare the student as "pass" on satisfactory completion. A letter grade "P" is awarded to declare pass.
- (iii) The marks scored in these courses will not be taken into consideration for the SGPA / CGPA calculations in the grade sheet.

Text Books						<u>i</u>					

- "Gender and Society" by Raewyn Connell This book provides a comprehensive overview of gender roles, power dynamics, and the social construction of gender.
- "The Second Sex" by Simone de Beauvoir A historical and philosophical examination of women's oppression and gender 2. inequality.
- "Women and Gender in the Indian Society" by Neera Desai and Usha Thakkar Focuses on the context of gender roles, 3. inequality, and feminist movements in India.

List of Experiments:

Programmable Logic Controller

- 1. Implementation of Latching and Unlatching concepts in PLC
- 2. Interfacing of lamp and button with PLC for ON/OFF operation.
- 3. Perform Delayed Operation of Lamp using Push Button.
- 4. Combination of Counter and Timer for Lamp ON/OFF operation.
- 5. PLC program for Sequential Motor Control.
- 6. PLC based automated car parking system or elevator system.
- 7. DOL and Star Delta Starter operation for Three Phase Induction Motor using PLC.
- 8. PLC program for Forward and Reverse Control of Motors
- 9. PLC based Stair case lighting control system
- 10. PLC based Traffic Light Control system
- 11. Design and development of solar tracking control system using PLC
- 12. PLC program for speed control of DC motor

SCADA

- 1. PLC interface with SCADA and status read / Command Transfer operation
- 2. Alarm annunciation using SCADA

Internet of Things IoT

- 1. IoT based Street light monitoring and control
- 2. IoT-based Industrial pollution monitoring system.
- Sensors Interfacing (IR Sensor, Ultrasonic Sensor, Soil Moisture Sensor) using ESP32

Course Description

Project work may be assigned to a group of students not exceeding 4 per group, under the supervision of project supervisor(s). Each student batch shall be required to undertake a suitable project in industry / research organization / department in consultation with the Head of the Department and the supervisor. A student shall register for the Project Phase I in 7th semester. The project team and the project title can be decided in the 6th semester itself.

The process and guidelines for industry/Research organization projects

- (i) Students opting for the industry / research organization project should decide, identify and interact with relevant industry/ research organization in 6th semester itself. Training and Placement cell shall help to establish contact with industries. Students shall take necessary help from their department for exact plan of action and apply to the industry / research organization through proper channel. The project coordinator shall decide the schedule appropriately.
- (ii) Students shall submit the application attached with relevant details viz. correspondence with industry, area and nature of project and its proposal to the department before the end of 6th semester.
- (iii) Head of the Institution / Dean Academics / Dean R&D / Placement Officer shall issue permission letter to the students on the recommendation of HoD and supervisor. Students shall be allowed to do the final year project work in the industry.
- (iv) An internal supervisor from the department and mentor from the industry/ research organization where the project is to be undertaken shall be allocated to the students. Both supervisors should discuss and finalize the scope of the project work and monitor the progress together.
- (v) Internal supervisor should visit the industry a minimum of 3 times in a semester to see the progress of his/her students and a brief report should be submitted to the HoD about the progress.
- (vi) Students should maintain a record on the progress and get the approval from both internal and external supervisors at least twice in a month either by physically or through email communication. If the progress is not found satisfactory due to any reason, the supervisor should take the corrective action, after consulting with project coordinator and HoD.
- (vii) Progress report and certificate of completion of the project work from the industry / research organization shall be submitted by the students to the respective supervisor. The mode of evaluation shall be same as that of the in-house project.

The Process and guidelines for in-house project

- (i) Students execute their in-house project in the Department with proper approval from the HoD through the respective supervisor.
- (ii) Students should maintain a record on the progress and get the approval from supervisor at least once in a week. If the progress is not found satisfactory due to any reason, the supervisor should take the corrective action, after consulting with project coordinator and HoD.

Criteria for Assessment of Project Work

- Interim project report shall be submitted before the project review with the approval of the supervisor. The Project Report prepared according to the approved guidelines and duly signed by the supervisor and the Head of the Department shall be submitted as per the timeline announced by the department.
- The End Semester Examination for the project work shall consist of an evaluation of the final project report by an external examiner, followed by a viva-voce examination conducted by a committee consisting of the external examiner and an internal examiner. The Controller of Examinations (CoE) shall appoint Internal and External Examiners for the End Semester Examination of the Project Work.

Course Description

The student is required to undergo 'internship' in industry / research laboratory / higher learning institution for a minimum period of 4 weeks during vacations and shall complete the internship before the completion of 7th semester.

- (i) The internship carries 1 credit.
- (ii) Each spell of internship shall be for a period not less than 2 weeks.
- (iii) The main purpose of internship is to enhance the general professional outlook and capability of the student to advance his/her chances of improving the career opportunities. The student should get prior approval from the Head of the Department and Training and Placement cell in the college before undertaking the internship and need to submit a detailed report after completion for the purpose of assessment. The internship marks will be given in 7th semester mark sheet.

A committee comprising of two faculty members appointed by Head of the Department will assess the internship for 100 marks.

Course Name	MODE	ERN CONTROL SYSTEMS	3	0	0		3	25	75	100	
			EEE								
Prerequisite	Electro	onics							BT Ma		
Course	On completion of the course, the students will be able to										
	CO1	CO1 Demonstrate pole placement and the state observer using state space and state feedback system in modern control systems									
	CO2	Analyze the nonlinear system behaviour by phase plane and describing function methods									
Outcomes	CO3	Predict the stability by describing function method and Lyapounov's method for stability									
	CO4	Illustrate the Z transform analysis of sampled data control systems.									
	CO5	Examine discrete-time models using z that is used in digital control system.	crete-time models using z domain to know the concept of sampling process in digital control system.							К3	
UNIT- I	State Variable Design Periods:09										
sufficient conditi	on for arl	state variables and state model - Effect pitrary pole placement-State regulator d htrol-State space controller for DC motor	lesign - De	sign of	state ob					CO1	
UNIT- II	Non-Li	Non-Linear Systems - I Periods:09									
		es - Phase plane method: concepts, si analysis by phase plane method	ingular poi	nts, stat	oility of I	nonline	ar syste	ms - Cons	truction of	CO2	
UNIT- III	Non-Li	near Systems - II	Periods:09								
		cribing function method - Jump resonar g and identification of a DC motor	nce - Lyap	ounov's	method	for sta	bility stu	udy, conce _l	ot of Limit	CO3	
UNIT- IV	Sampled Data Analysis - I Periods:09										
		nalysis of sampling process signal recor onse of Linear discrete system	nstruction d	lifference	e equati	ons - Z	transfor	m function,	Inverse Z	CO4	
UNIT-V	Sampled Data Analysis - II Periods:09									.	
		ling instants - Corelation between Z and ability, Jury's Test and compensation tec						equation - S	Stability	CO5

			L	Т	Р	С	CAM	ESE	TM
Course Name		R PHOTOVOLTAIC FUNDAMENTAL APPLICATIONS	3	0	0	3	25	75	100
		ECE, ICE, MECH, CIVIL, MCTR, CC	E, BME,	IT, CSE	, FT, Ala	&DS, CSB	S	<u> </u>	···
Prerequisite	Physic	al Science for Engineers, Electrical Engine	ering						
	On co	empletion of the course, the student	s will be	able to					Mapping est Level
	CO1	Describe the basic concepts of solar cells	and its p	roperties.					K2
Course	CO2	Discuss about the selection of interfacing	compone	ents in sol	ar grid co	onnected sy	stems.		K2
Outcomes	CO3	Review about the various DC/AC equithrough requirements and design calculate	•	used fo	r stand-a	alone PV a	applications	3	K2
	CO4	Analyze the applications of hybrid system	s and def	ine the st	ructure c	f micro grid	system.		K3
	CO5	Compute cost analysis of solar PV system	ns.						K3
CO5 Compute cost analysis of solar PV systems.

Prerequisite			-								
	On completion of the course, the students will be able to								BT Mapping (Highest Level)		
	CO1	Apply literature survey techniques to identify and define the problem statement for the project									
Course	CO2	Comprehend, plan, and implement a project related to electric mobility									
Outcomes	CO3	Develop a real-time application utilizing electric vehicle components, processes, or systems									
	CO4	Interpret and apply knowledge of publication and copyright processes in research									
	CO5	Justify and present project findings through structured oral and written reports									

Course Description

Student must select a project topic either from published lists or propose a suitable topic in consultation with his/her supervisor. The objective of the project is to enhance understanding of fundamental principles by applying them to a new challenge, which may involve designing and manufacturing a device, conducting research, developing a computer or management project, or solving a design problem.

The project progress will be assessed through a minimum of two reviews. The project evaluation shall be carried out by a Project evaluation committee comprising the Head of the Department or his/her nominee (Chairperson), Project coordinator (Professor / Associate Professor) and the project supervisor(s). The End Semester Examination for the project work will include an evaluation of the final project report by an external examiner, followed by a viva-voce examination conducted by a panel comprising the external examiner and an internal examiner.
